

While the technology bubble of the 90's delivered leaps in Internet technology, the last few years have seen their share of promising emerging technologies. These advances are making it possible to effectively leverage existing legacy systems and make for a more agile and efficient enterprise.

At ovionx, we pride ourselves on our ability to deliver business solutions that yield positive bottom line results, long-term business benefits, and a competitive advantage.

We capitalize on the most innovative and robust technologies available to help our clients optimize their business and leverage relationships with suppliers, customers, trading partners and employees. Our expertise

"We are about experience and innovation ..." includes *customer relationship management, enterprise application integration, and supply chain management.*

We've earned our clients' trust by making a commitment to their success. We collaborate and innovate to quickly deliver positive, bottom-line results.

What are our clients saying?

"Very good job managing projects ... very responsive ... flat out know their stuff ..."

— John Henley (Chief Operating Officer - CSS)

"Under a tight timeline, they took over a very complex implementation and delivered great results ..."

— Tom Wright (Senior Systems Analyst - Bridge Worldwide)

"Rank at the top of our cadre of experts ... the best in application development and integration ..."

— David Lind (CIO - Neighborly Care Network)

"Consistently exceed our greatest expectations ... they leave nothing to chance ... head of their class"

— Robert Castro (President - American Data)

"They understand what lies beneath my requirements ... it's like having a high level IT department on-call! ..."

— Joe Reger (President - frogfire DIGITAL)

Customer Relationship Management

Customer Portals: We assist clients in planning, building, and deploying customer portals that build online relationships with customers and capture valuable information. This solution delivers flexible and integrated information and user-relevant dashboards.

Intranets/Extranets: Through the use of Web tools, we help develop an efficient back-office environment that encompasses finance and HR functions and processes as well as IT, procurement, and customer management. These solutions can help users leverage personnel for increased productivity, improved customer relationships, sustainable cost savings and process efficiencies, and employee self-service environments.

Application Integration / Cloud Computing

The Internet offers significant advantages for integration between buyers and sellers. We offer a variety of solutions that enable improved operations through supply chain automation, direct procurement, and trading partner integration. We enable **four levels of integration: data integration, application integration, process integration, and business-to-business integration.**

Mobile Computing

Through deployment of mobile technologies, we help organizations identify and implement opportunities for increased customer satisfaction, enhanced productivity, lower costs, and increase revenue in its interactions with employees, customers, and suppliers. Enabling wireless applications, facilitates transactions for users, regardless of their location or access device. These services include extending website functions to mobile platforms such as the BlackBerry®, PocketPC®, or iPhone®.
